LinkedIn: [linkedin.com/in/priyashah](https://www.linkedin.com/in/priyashah)

Profile: Data Scientist with an MSc in Data Science and practical experience applying statistical analysis and machine learning to business problems. Skilled in Python, SQL, pandas, NumPy, scikit-learn, XGBoost, and data visualisation. Experience with AWS & relational databases.

Qualifications

MSc Data Science

University of Manchester, UK | 2021–2022

Modules: Statistical Modelling, Machine Learning, Data Mining, Database Systems, Data Visualisation

BSc Computer Science

University of Leeds, UK | 2018–2021

Skills

- **Programming:** Python, SQL
- **Data Analysis:** pandas, NumPy, Statistics, Exploratory Data Analysis
- **Machine Learning:** scikit-learn, Regression, Classification, XGBoost
- **Visualisation:** Matplotlib, Data Visualisation, Dashboard Development
- **Cloud:** AWS
- **Databases:** Relational Databases, SQL Databases

Experience

Junior Data Scientist

Data Analytics Solutions Ltd.

2022–2024

- Analysed customer and sales datasets to identify trends and support business decision-making.
- Developed machine learning models for classification and regression problems.
- Used Python, pandas, NumPy, and scikit-learn for data preparation and modelling.
- Built SQL queries to extract and transform data from relational databases.
- Created visualisations and dashboards to communicate analytical findings to stakeholders.
- Experimented with XGBoost for predictive modelling tasks.

- Contributed to the deployment of data-driven applications using AWS.

Projects

Customer Churn Prediction

- Developed a machine learning model to predict customers at risk of churn.
- Cleaned and transformed customer-level data using pandas and NumPy.
- Compared multiple classification algorithms using scikit-learn.
- Evaluated model performance using appropriate classification metrics.
- Identified important features associated with customer churn.

Sales Forecasting

- Built a forecasting solution to estimate future sales using historical sales data.
- Performed exploratory data analysis to identify trends and patterns.
- Compared regression-based approaches and evaluated predictive performance.
- Presented results through data visualisations and summary dashboards.

Data Analysis Dashboard

- Developed an interactive dashboard for exploring business performance metrics.
- Combined SQL-based data extraction with Python-based analysis.
- Created visualisations to highlight trends, anomalies, and key performance indicators.
- Designed the dashboard for use by non-technical business stakeholders.

Certifications

- AWS Cloud Practitioner
- Machine Learning with Python — Online Certification
- SQL for Data Analysis — Online Certification

Additional Skills

- Data Cleaning
- Exploratory Data Analysis
- Statistical Analysis
- Feature Engineering
- Model Evaluation
- API Integration
- Cloud Deployment
- Technical Documentation
