

Alex Morgan - NLP Engineer / Computational Linguistics Graduate

London, UK | alex.morgan@example.com | +66 1234 567 890 | LinkedIn: linkedin.com/in/alexmorgan

Personal Profile

Computational Linguistics graduate with hands-on experience developing natural language processing applications using Python and modern machine learning frameworks. Experienced in text classification, sentiment analysis, abstractive summarisation, prompt engineering, and integration of LLM APIs. Strong interest in building practical NLP systems and applying language technologies to real-world text processing problems.

Experience

NLP Research Assistant — University Project

2023

Edinburgh, UK

1. Supported experiments involving text classification and language modelling.
2. Prepared and cleaned textual datasets for machine learning experiments.
3. Compared model performance across different preprocessing and modelling approaches.
4. Documented experimental results and findings.

Education

MA Computational Linguistics

2022-2023

University of Edinburgh, UK

Core Skills

- **Programming:** Python
- **NLP:** Text Classification, Sentiment Analysis, Text Summarisation, Natural Language Processing
- **Machine Learning:** scikit-learn, PyTorch, TensorFlow
- **LLM Technologies:** Prompt Engineering, LLM APIs
- **Other:** Model Evaluation, Text Preprocessing, Feature Engineering

Personal Projects

NLP Text Classification Project:

1. Developed a Python-based NLP classification pipeline for categorising unstructured text.
2. Performed text preprocessing, feature extraction, model training, and evaluation.
3. Used scikit-learn to experiment with multiple classification approaches.
4. Evaluated model performance using standard classification metrics.

Abstractive Text Summarisation

1. Built an abstractive summarisation system for generating concise summaries from longer documents.
2. Experimented with neural NLP approaches using PyTorch and TensorFlow. Evaluated generated summaries for relevance, fluency, and information retention.

LLM-Powered Web Summariser

1. Developed an application that retrieves web content and generates concise summaries using an LLM API.
2. Designed prompts to improve consistency and relevance of generated summaries.
3. Implemented text extraction and preprocessing before sending content to the language model.
4. Built a simple application workflow connecting web content retrieval with LLM-based summarisation.
